

[STATE] AIR NATIONAL GUARD
[UNIT] MEDICAL GROUP
[ADDRESS]

Deployment Availability Working Group (DAWG) Case Review Meeting

CASE GROUP I. (para 4.1.3.5). Initial-RILO.

I.A. Review of new/potential I-RILO cases for entry into NDDES or MEB process.

I.B. Potential NDDES I-RILO cases pending FSS interview.

I.C. NDDES I-RILO cases pending NARSUM submission.

CASE GROUP II (para 4.1.3.8.) Renewal-RILO.

The PEBLO (or ARC equivalent) will track Renewal RILO due dates for all personnel with an Assignment Limitation Code C (ALC-C). MSME (or PH) will assist in keeping this list current by advising the PEBLO of any new RILO cases (Airmen with an existing ALC-C) identified during the in-processing medical record review process. Prior to each DAWG, the PEBLO (or ARC equivalent) will review these records to identify problems which require attention.

CASE GROUP III (para 4.1.3.2.) AAC 31 Review. ASIMS Web-generated list of all personnel with an AAC 31 will be reviewed by MSME prior to the DAWG.

III.A. (para 4.1.3.2.1.) 90-Day AAC 31 Review. Any AF Form 469 with an AAC 31 that has been in effect for 90 days or more will be reviewed to ensure the MR are applied appropriate to the clinical condition.

III.B. (para 4.1.3.2.2.) Chronic AAC 31 Review. Any AF Form 469 with an AAC 31 that has been in effect for 300 days or greater will be reviewed.

CASE GROUP IV. (para 4.1.3.3.) Other cases.

The DAWG may also receive cases for review referred directly from the provider, from HQ AFPC Medical Retention Standards Branch (DPANM), from the ARC SGP, from the EP (or MLO for ARC) or from an Airman's Commander.

CASE GROUP V. (para 4.1.3.1.) Airmen with DLCs which do not affect mobility.

For Airmen with DLCs \geq 365 cumulative days in duration but who are still mobility qualified (to include DR, FR, and/or FAE), the MSME will review each case following the review by the PCM as part of the PHA process. Based on the PCM's recommendation and the results of MSME review, cases may be referred to the DAWG to consider the need for restriction continuance, termination of restrictions, or any changes in the condition that may necessitate a RILO. Medical conditions impacting the fitness assessment only and not impacting mobility, retention, or AFSC duties do not automatically require Initial RILO.

CASE GROUP VI. (para 4.1.3.6.) AAC 81, pregnancy.

The MSME function will query ASIMS for all AAC 81 cases monthly and the continued pregnancy status will be confirmed.

CASE GROUP VII (para 4.1.3.9.) MEDCON cases.

The DAWG shall review initial medical continuation (MEDCON) cases for IDES consideration.
